White Balancing: Olympus Tough T6& T7

**When? At the beginning of every dive**
How?

1.   Turn on camera and then turn dial so the line is even with the "fish" icon

2. Press "OK" button and scroll to the right until you reach the "Capture WB" then press the "INFO" button

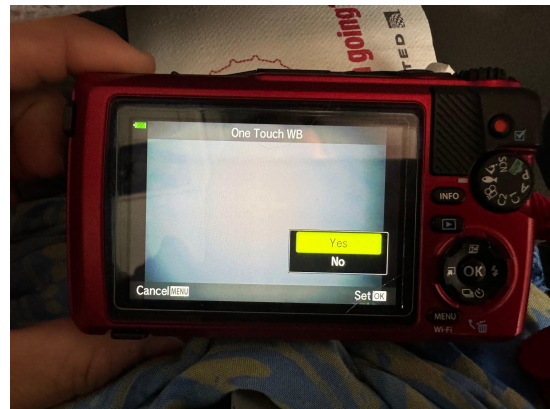

3. The camera will then prompt you to "take a photo of a white sheet of paper" : point this at a blank part of your slate or if you do not have a slate you can use white sand

4**.** Take a photo by pressing down on the shutter button

★   The photo should appear on the screen and say "one touch WB" with a menu "yes" or "no". Click "OK" to select the highlighted "yes" and set the white balance.

If you are unhappy press the "menu" button below the "ok" button and start the process over

If you try to white balance against a darker surface OR make an error you may have a warning come up which says "**WB levels are extreme**" - I recommend starting over.

Dive Task Checklist

First Dive:

- ❏ Pull ENV Logger
- ❏ Fill out all datasheet info
- ❏ Photo of data sheet

Last Dive :

- ❏ Replace ENVLogger
- ❏ Download Hobo
- ❏ Photo Quadrats
- ❏ Remove all flagging tape
- ❏ Fill out all datasheet info
- ❏ Photo of datasheet
